

# CLASS: 14

## Other Semantics

29 Aug 2023

- |                 |        |   |
|-----------------|--------|---|
| 1. Line Break   | <br>   |   |
| 2. Blank Space  | &nbsp; |   |
| 3. Preformatted | <pre>  |   |
| 4. Code Block   | <code> | It configures a code snippet to make SEO Friendly |
| 5. Variables    | <var>  | It is used for variables in program.              |
| 6. Sample Text  | <samp> | It is used for comments and captions in page.     |

### Syntax:

<samp> Program to Print Addition </samp>

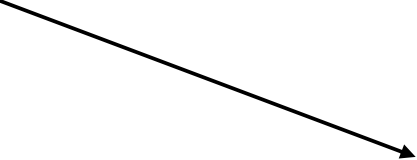

<code>  it is telling that this is a code area

<pre>  Exactly as you would like to write the code.

```
int <var> x </var> = 10;  
int <var> y </var> = 20;
```

</pre>

</code>

 -Wherever, you are writing these variables, they must be defined in the <var>.

### Ex:

<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8">

<meta name="viewport" content="width=device-width, initial-scale=1.0">

<title>Document</title>

<style>

```
var {  
  color:blue;  
}
```

```
samp {  
  color:gray;  
}
```

```
code {  
  color:brown;  
}
```

</style>

</head>

<body>

<div>

<samp>Program to print length X Height</samp>

</div>

<code>

<pre>

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```

        int <var>length</var> = 11;
        int <var>width</var> = 12;
        printf("%d\n", <var>length</var> * <var>width</var>);
    }
</pre>
</code>
</body>
</html>

```

**7. Small Text**      <small>      It sets letter size small

**8. Large Text**      <big>      It sets letter size large

### Syntax:

```
<small> your text </small>
```

```
<big> your text </big>
```

## 9. Details & Summary

- Details is a container that can display expandable and collapsable content.
- Summary is a caption for details container.

### Syntax:

```
<details>
```

```
    <summary> Title </summary>
```

```
    ... your content...
```

```
</details>
```

- If you want details to expand by default, then define the attribute "open".

### Syntax:

```
<details open>
```

```
</details>
```

### Ex:

```
<!DOCTYPE html>m
```

```
<html lang="en">
```

```
<head>
```

```
    <meta charset="UTF-8">
```

```
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
    <title>Document</title>
```

```
    <style>
```

```
        details div {
```

```
            background-color: black;
```

```
            padding: 10px;
```

```
            color: white;
```

```
        }
```

```
    </style>
```

```
</head>
```

```

<body>
  <details open>
    <summary>What is Netflix?</summary>
    <div>
      Netflix is a streaming service that offers a wide variety of award-winning TV shows,
      movies, anime, documentaries and more – on thousands of internet-connected devices.
    </div>
  </details>
  <details>
    <summary>How much does Netflix cost?</summary>
    <div>
      Netflix is a streaming service that offers a wide variety of award-winning TV shows,
      movies, anime, documentaries and more – on thousands of internet-connected devices.
    </div>
  </details>
</body>
</html>

```

**Ex:**

```

<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <style>
    details span {
      display: block;
      margin-bottom: 10px;
      margin-left: 20px;
      background-color: black;
      color: white;
      padding: 4px;
      width: 150px;
    }
  </style>
</head>
<body>
  <nav>
    <details open>
      <summary>HTML</summary>
      <span>Normal Elements</span>
      <span>Void Elements</span>
      <span>Semantics</span>
      <span>Meta</span>
    </details>
    <details>
      <summary>CSS</summary>
      <span>Styles</span>
    </details>
  </nav>

```

```

    <span>CSS Rules</span>
    <span>CSS Units</span>
    <span>CSS Colors</span>
  </details>
</nav>
</body>
</html>

```

## 11. Datalist with Terms and Definitions

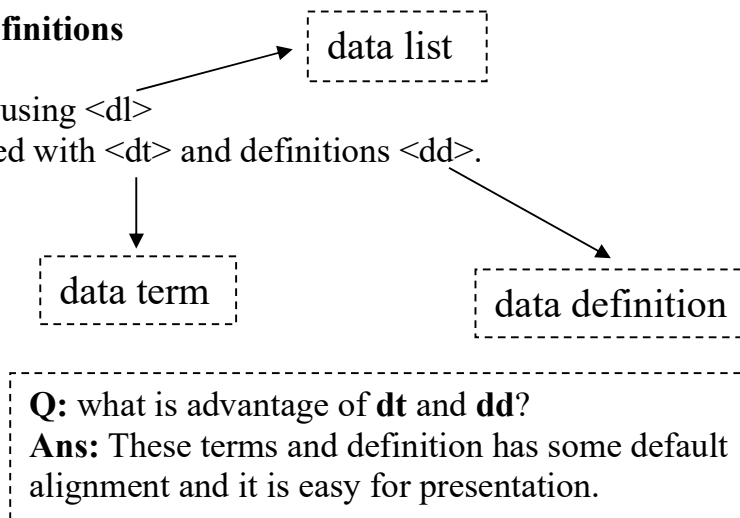

- HTML data list can be defined using `<dl>`
- It is a collection of terms defined with `<dt>` and definitions `<dd>`.

### Syntax:

```

<dl>
  <dt> Term </dt>
  <dd> Definition </dd>
</dl>

```

### Ex-1:

```

<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <style>
    dt {
      background-color: gray;
      color: white;
      font-weight: bold;
      padding: 4px;
      margin-bottom: 5px;
    }
  </style>
</head>
<body>
  <dl>
    <dt>HTML</dt>
    <dt>Markup Language</dt>
    <dd>It is a markup language. </dd>
    <dd>It is used for presentation.</dd>
    <dd>Designed by Tim Berners Lee.</dd>
    <dt>CSS</dt>
    <dd>It defines styles.</dd>
    <dd>It can make HTML more interactive.</dd>
    <dt>JavaScript</dt>
    <dd>It manipulates DOM.</dd>
  </dl>

```

-there can be multiple term also, it depends on you.

-In every term, there can be several definitions.

```
</body>
</html>
```

## Ex-2:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <style>
    dl {
      display: grid;
      grid-template-columns: 3fr 9fr;
    }
    dt {
      background-color: black;
      color: white;
      padding: 4px;
      margin-bottom: 10px;
    }
    dd {
      background-color: lightgray;
      color: black;
      padding: 4px;
      margin-bottom: 10px;
    }
  </style>
</head>
<body>
  <dl>
    <dt>First Name</dt>
    <dd>some name</dd>
    <dt>Last Name</dt>
    <dd>some name</dd>
    <dt>Father Name</dt>
    <dd>some name</dd>
    <dt>Age</dt>
    <dd>some number</dd>
    <dt>Date of Birth</dt>
    <dd>some date</dd>
  </dl>
</body>
</html>
```

-this grid can identify terms as one column and definition as another column.  
-it will show you side by side

First Name	some name
Last Name	some name
Father Name	some name
Age	some number
Date of Birth	some date

-it is not necessary that always terms and definition will display one below another.

-they can split into columns because they are internally design like that.

-display is designed for only 2 columns for data list, because all terms can be in one column and all definition can be in another column.

**Note:** You can make any content sticky to page by using CSS "position" attribute.

**Syntax:**

```
dt {  
  position: sticky;  
  top:0px;  
}
```

**Ex:**

```
<!DOCTYPE html>  
<html lang="en">  
<head>  
  <meta charset="UTF-8">  
  <meta name="viewport" content="width=device-width, initial-scale=1.0">  
  <title>Document</title>  
  <style>  
    .title {  
      font-size: 25px;  
      font-weight: bold;  
    }  
    dt {  
      background-color: black;  
      width: 150px;  
      padding: 5px;  
      color:white;  
      position: sticky;  
      top: 0px;  
    }  
  </style>  
</head>  
<body>  
  <nav>  
    <div class="title">Shopper.</div>  
    <dl>  
      <dt>Electronics</dt>  
      <dd>Televisions</dd>  
      <dd>Mobiles</dd>  
      <dd>Watches</dd>  
      <dd>Televisions</dd>  
      <dd>Mobiles</dd>

 <dd>Men</dd>  
 <dd>Kids</dd>  
 <dd>Women</dd>

```

<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
<dd>Kids</dd>
<dd>Women</dd>
<dd>Men</dd>
</dl>
</nav>
</body>
</html>

```

-you have to keep a lot of contents so that it will be scrollable.

-if you take three or four lines and you will try to make it scrollable in this case, it will not work because you have very few contents.

## 12. Fieldset and Legend

- Fieldset is a container with frame.
- Legend is a caption set for fieldset.
- Usually, it is used for creating a group of elements in page.

### Syntax:

```

<fieldset>
  <legend> Title </legend>
  ...your content...
</fieldset>

```

**Note:** You can set shadow for any container by using "box-shadow"

```

{
  box-shadow : horizontal vertical blur color;
}

```

horizontal, vertical, blur      => defined in pixels.

**Ex:**

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
  <style>
    dl {
      display: grid;
      grid-template-columns: 3fr 9fr;
    }
    dt {
      background-color: black;
      color:white;
      padding: 4px;
      margin-bottom: 5px;
    }
    dd {
      background-color: lightgray;
      color:black;
      padding: 4px;
      margin-bottom: 5px;
    }
    fieldset {
      margin-bottom: 20px;
      box-shadow: 10px 10px 2px black;
      border-radius: 20px;
      background-image: url("public/images/kids.jpg");
      background-size: cover;
      width: 500px;
    }
    legend {
      text-align: center;
      background-color: black;
      color:white;
      font-weight: bold;
      padding: 4px;
      width: 150px;
      box-shadow: 5px 5px 5px gray;
      border-radius: 20px;
    }
  </style>
</head>
<body>
  <fieldset>
    <legend>Personal Details</legend>
    <dl>
```

```
<dt>First Name</dt>
<dd>some name</dd>
<dt>Last Name</dt>
<dd>some name</dd>
<dt>Age</dt>
<dd>some number</dd>
</dl>
</fieldset>
<fieldset>
<legend>Contact Details</legend>
<dl>
<dt>City</dt>
<dd>cityname</dd>
<dt>State</dt>
<dd>state name</dd>
<dt>Postal Code</dt>
<dd>some code</dd>
</dl>
</fieldset>
</body>
</html>
```
